

ORACLE® Conject

Conject PM

SYSTEM REQUIREMENTS

conjectPM System Requirements

To use conjectPM you don't need to install extra software on our Computer. You just need your Internet browser!

System configuration

Check with the following settings if your computer is optimally configured to work with conjectPM.

- **Browser for Windows:** MS Internet Explorer Version 9 to 11 or Firefox Version 20 or higher or Chrome Version 33 or higher
- **Browser for Mac:** Firefox Version 20 or higher or Chrome Version 33 or higher
- **Pop-Up Blocker:** Deactivated or configured for conject.com
- **Java Environment:** Oracle, JRE 7 Update 51 and higher as well as JRE 8
- **Cookies:** Acceptance enabled
- **Encryption:** SSL enabled
- **JavaScript:** enabled
- **Ports:** 80 for http and 443 for https opened
- **Screen Resolution:** at least 1280 x 768

Additionally we recommend the following settings:

- http: Usage of http 1.1.
- Enter *.conject.com as a trusted site of the Internet Explorer.
- We recommend the following helpful setting for Firefox!
<http://support.conject.com/entries/330023>

Firewall and Proxy settings

To have a flawless data exchange with conjectPM and for an optimal connection speed we recommend the following settings:

- Enable the ports 80 (http) and 443 (https). These are default settings. But in seldom cases the connection to https sites is forbidden. In this case, you cannot use conjectPM, contact your IT administrator to get access to https connections.
- In many companies the outward data stream to the Internet is blocked or filtered by a firewall or by a preceding instance like a proxy server, a web-washer or similar web content filtering systems. If such systems are under use it could happen that some contents send from conjectPM are being blocked or that the connection speed is getting slow. Therefore we recommend entering *.conject.com into the so called Whitelist of these systems in order to ensure a flawless transfer of all information from and to conjectPM.

Get help for the system requirements

If your computer doesn't fulfill one or several system requirements or if you have technical problems when using conjectPM you get help for all required settings in our Support Portal at:
<http://support.conject.com/entries/328423>

Alternatively ask your IT administrator for help. Of course our Support Team will assist you any time as well.
